Human Oversight Policy

Document ID: AI-HO-001
Version: 1.0
Effective Date: February 2026
Applies To: Studio Clarté and Maimai Supply
Classification: Public / Available Upon Request

---

1. Purpose

This Human Oversight Policy establishes Clarity AI Lab's commitment to meaningful human review and responsibility in the use of its AI-assisted systems.

Clarity AI Lab products are assistive tools and do not operate as autonomous decision-making systems.

---

2. Oversight Principle

AI-generated outputs:

- Support human decision-making
- Do not replace professional judgment
- Do not execute automated legal, financial, grading, or compliance actions
- Require review prior to operational use

Users retain full responsibility for how outputs are interpreted and applied.

---

3. Studio Clarté (Learning & Literacy)

The system:

- Does not autonomously grade students
- Does not create educational records
- Does not diagnose learning conditions
- Does not adapt content using behavioral profiling

Teachers, parents, or guardians must review outputs before instructional use.

The system is an educational support tool — not a diagnostic or assessment engine.

4. Maimai Supply (Procurement & Customs Suite)

The system:

- Does not file trade documentation
- Does not submit customs forms
- Does not make regulatory declarations
- Does not execute transactions

Users must:

- Review all documentation outputs
- Verify classification codes
- Confirm compliance decisions
- Apply professional or legal judgment before submission

---

5. Escalation & Override

Users are expected to:

- Disregard outputs that appear incorrect or inappropriate
- Seek human review when uncertain
- Report potentially problematic outputs via feedback channels

Clarity AI Lab maintains internal review procedures for flagged outputs.

---

6. Governance Oversight

Human oversight effectiveness is reviewed quarterly through:

- AI Risk Register updates
- Incident review processes
- Governance committee review

---

7. Non-Autonomy Declaration

Clarity AI Lab does not deploy AI systems that produce:

- Legal decisions
- Financial determinations

- Educational grading outcomes
- Automated compliance determinations without human review
